

SauceDemo Login Testing

Test SauceDemo website login page using basic manual testing techniques.

1. Test Cases

No	Module	Test Case ID	Scenario	Steps	Test Data	Expected Result	Actual Result	Status	SS	Notes
1	Authentication & Access Control	AUTH-01	Valid username and password	1.Open SauceDemo. 2.Enter valid username. 3.Enter valid password. Click 4.Login.	Username: standard_user Password: [valid password used during testing]	User should successfully login.	User successfully logged in.	Pas s		
2		AUTH-02	Incorrect password	1.Open SauceDemo. 2.Enter valid username. 3.Enter invalid password. Click 4.Login.	Username: standard_user Password: [Invalid password used during testing]	Login should be prevented and an appropriate error message should appear.	Login was prevented.	Pas s		
3		AUTH-03	Both fields	1.Open SauceDemo	Empty fields.	Login should be	An error mess	Pas s		

			empty	2. Enter both fields empty.		prevented and an appropriate error message should appear.	age appeared.			
4		AUT H-04	Valid username, empty password	1. Open SauceDemo 2. Enter valid username empty. 3. Enter empty password 4. Click Log In	Username: standard_user, empty field for password	Login should be prevented and an appropriate error message should appear.	The system did not allow the user to log in.	Pas s		

2. Test Execution Summary

- 4 test cases were executed covering positive and negative login scenarios.

Test cases	4
Passed	4
Failed	0
Blocked	0

Overall Observation

All four executed login scenarios behaved as expected. Appropriate validation messages were displayed for invalid or incomplete login inputs.

3. Defects

- **No defects identified in the executed test cases.**
- Defect reporting was not required for the executed scenarios because the observed behavior matched the expected results.
